PARASITE FORECAST

NADIS CPD IS ACCREDITED BY

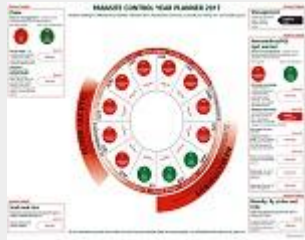

AND QUALIFIES FOR CPD

PARASITE FORECAST JANUARY 2018

NADIS publishes a monthly Parasite Forecast for farmers and livestock keepers, based on detailed Met Office data. The Parasite Forecast outlines the parasitic challenges facing cattle and sheep in the different UK regions.

PARASITE FORECAST

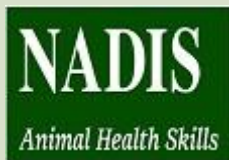

In the January issue plan this season's control strategy

- Parasite Control - planning ahead
- Liver fluke risk
- Chronic fluke disease in sheep and cattle
- Lice in sheep and cattle

WEBINAR

Watch the webinar for the January Parasite Forecast

Liver fluke control in cattle:
Infection is more commonly encountered in beef cows grazing poor wet pasture....

Consider targeted parasite control throughout grazing season....

Don't ignore the threat of lungworm....

Prepare for sheep parasite control in the season ahead...

Nematodiosis in Sheep
A parasitic infection which causes profuse scour in lamb grazed on pasture in consecutive years....

RELATED PARASITE DISEASES

PGE and lungworm in cattle

Present on many farms and can cause respiratory distress and coughing in young or previously unexposed cattle....

Gastrointestinal Nematode Infestations in Sheep

Perhaps the most important group of conditions limiting intensive sheep enterprises....

Liver fluke control in sheep:

Liver fluke infestation (fasciolosis) has always been a problem during the late autumn and winter in the wetter western areas of the UK.....
